Precision engineered cutting tools

PRECIMAC TOOL LTD.
 Metal Cutting Tool Specialist

EXCEPTIONAL CUTTING SOLUTIONS

Since 1969, Precimac Tool Ltd. has been providing North American manufacturers with superior custom metal cutting tools and fast, personalized service. Our precision tools are specifically engineered for optimum performance, greater cost efficiency and longer life. We bring years of dedicated experience to developing creative solutions for our customers through our technical sales in the field. Our state-of-the-art CNC machines, quality assurance program and customer service systems guarantee satisfaction with every order.

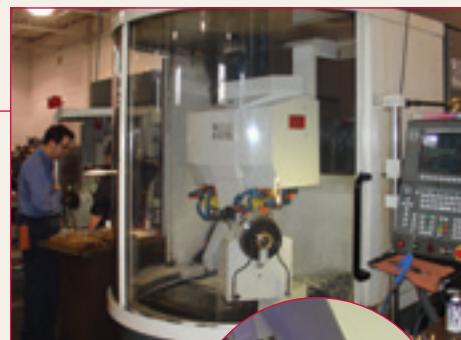

SHARPENING & REFURBISHING SERVICES

As a full-service supplier, we offer a comprehensive regrinding and refurbishing service both for original Precimac tools and for competitive brands. All tools serviced are totally controlled by our QA department and inspected with the same quality standard as new tools manufactured. We work closely with each customer to optimize quantities, deliveries and sharpening options. Our induction-brazing facilities provide high quality silver soldering when tools are re-tipped. We also welcome customers to take advantage of our CNC ID & OD grinding capacities for high precision grinding services.

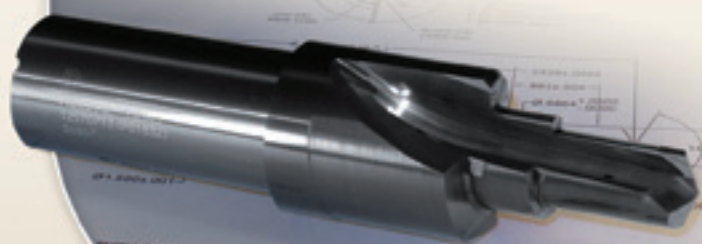

CUSTOM METAL CUTTING TOOLS FOR EVERY APPLICATION

Precimac has built its reputation on the reliable supply of high performance carbide and HSS standard and custom tools. Our products include drills, reamers, milling and boring tools, slitting cutters, special form cutters, special inserts and holders, broaches and related specially engineered tooling. Our knowledgeable engineering and production team has perfected a number of integrated design characteristics to improve tool performance. The subland design of many Precimac tools provides a significantly extended tool life by allowing multiple resharpenings without loss of margin length. Available coolant-thru design and exotic PVD coatings increase overall tool performance in a variety of applications.

YOUR QUALITY & PRODUCTIVITY PARTNER

The critical component in the overall Precimac performance philosophy is our promise to provide our customers with a competitive edge. We are proud of the strong relationships we have built with our customers over the years. In addition to providing quality tools, we also share our technical knowledge and experience to improve our customers' manufacturing quality and productivity. As our mission states, we will provide total customer satisfaction through the endless pursuit of excellence in quality, service, cost and know-how.

"Precision tools

for all applications"
